

# GeoLeaf

*An Introduction to our EcoSystem*

**GeoLeaf**

# *The GeoLeaf Mission*

**"GeoLeaf's mission is to contribute towards the global water crisis by offering products and monetary donations to worldwide registered charities, providing fresh drinking water and sanitisation to communities in need"**

# *Our Currencies*

## **GeoLeaf Token (GLT)**

**GeoLeaf Token** will always remain the core currency within our ecosystem, providing 4% **GroveCoin (GRV)** reflections to holders, while continuing to support our mission with charity donations. Our upcoming NFT project will support the GeoLeaf chart, with generated income used in the form of Buybacks.

## **Leaf Token (LT)**

**Leaf Token** is a low tax token providing 3% **GeoLeaf (GLT)** reflections to all holders. Naturally as holders accrue GLT via the reflections system, they will automatically receive **GroveCoin (GRV)**.

Fee's collected from our upcoming staking platform will be used to support the chart in the form of Buyback.

**GeoLeaf**

# *Staking Platform*

## Staking Platform

Our multi-chain staking platform will serve multiple networks including Binance, Ethereum and Grove. Our platform will be available for projects to showcase their assets, providing their communities with a source of passive income.

## The Benefits

Income generated through project listing fees and transaction fees will be used to support the Leaf Token (LT) chart, in the form of Buybacks.

# NFT Collections

Our collection of NFT's "The Water Wizards" will have a total supply of 4000 unique traits, and will be made available for sale through our own developed minting website.

NFT's will be available to resell through a reputable BSC platform. This platform ensures the security and reliability of transactions, providing a trustworthy environment for buyers and sellers.

What makes our NFT collection unique is that each holder will receive 20% automatic BNB reflections by simply holding, and any additional income generated through minting and resales will be used to buyback GeoLeaf Token (GLT). This innovative approach aims to create a sustainable ecosystem for GLT holders and investors. By using the income from NFT sales to buyback GLT tokens, it helps to reduce the overall supply of GLT in circulation, increasing its scarcity and potentially driving up its value. This strategy not only provides a valuable opportunity for collectors and investors to acquire unique NFTs, but also offers a tangible benefit to GLT token holders by supporting the token's long-term value and growth.
